

Sound in different materials

Name:

Sound is the vibration of molecules, and can travel through gases, liquids and solids.

To do: Loop the string around an object. Put the string ends in your ears. Bang the object so that it vibrates. What sound(s) does it make?

Object What is it made of? What is its shape?	Sound through the string

Object What is it made of? What is its shape?	Sound through the string
